

YOU DOING WELL

SOFTWARE DEVELOPER

PROGRESS PRESENTATION

INTRODUCTION

The aim of this presentation is to provide a reflective overview of my journey as a Software Development Intern at Reginald SHERQ Services. This overview highlights my key experiences in transitioning from academic concepts to real-world applications, the essential professional and technical skills I have acquired along the way, and the core objectives I look forward to accomplishing for the remainder of the internship.

MY INTERNSHIP JOURNEY

Incredible Opportunity & Gratitude: Truly grateful for the internship experience at Reginald SHERQ Services.

Real-World Application vs. School Assignments: Moving beyond academic projects to build a real, functional application that helps the company grow and transition from manual processes to digital solutions.

A Roller Coaster Journey: Experiencing the natural ups and downs of a professional work environment where the workload can feel heavy at times.

Coding Challenges & Resilience: Encountering stubborn application errors that take hours to troubleshoot, which can be frustrating but has taught me the importance of staying calm under pressure

KEY LEARNINGS & GROWTH:

The Power of Communication: Embracing communication as a top priority and learning how to apply it effectively under Milly's guidance.

True Teamwork & Collaboration: Gaining hands-on experience working side-by-side with colleagues like Resego and the rest of the team to solve problems together.

Expanding Knowledge Beyond Tech: Learning the fundamentals of safety operations and field practices from my colleagues, despite coming from a purely technical background.

Discipline in Remote Work: Mastering the self-motivation required to stay productive, focused, and accountable while working from home.

Technical Growth & Critical Thinking: As our applications run into errors I got to apply the problem solving and critical thinking skills.

FUTURE GOALS AND OBJECTIVES FOR THE REMAINDER OF THE INTERNSHIP

- **Completing & Launching Projects:** Seeing our full-stack applications fully deployed and actively used by the company to drive digital operations.
- **Advanced Technical Growth:** Diving deeper into advanced backend architectures, cloud configurations, and independent deployment pipelines.
- **Strengthening Teamwork & Collaboration:** Continuing to work closely with my colleagues such as collaborating with Resego and coordinating with the wider team because teamwork is critical in our field for building robust solutions.
